

INTERNSHIP PLAN

Quantum Geographic Information System Intern (300 Hours)

Hours are approximate and may be adjusted based on intern pace, departmental needs and project requirements.

Phase	Objective	Key Activities	Target Goals	Approx. Hours
1. Orientation & Onboarding	Introduce the intern to the company, tools, and processes	- Company and project orientation - Introduction to the assigned project task - Familiarization with project requirements and workflow - Procurement and set-up of devices/equipment to be used for project tasks - Introduction to project documents and file types.	- Completed orientation - Prepared devices/equipment - Familiarization with assigned project task - Understanding of project workflow and responsibilities	~16
2. Learning & Skills Development	Develop foundational knowledge of QGIS practice, and alignment of docs	- Familiarization with KMZ files and site information - Familiarization with AutoCAD drawings - Familiarization with As-Built and Red-Line documents - Mentoring on proper document alignment procedures - Practice in aligning project documents	- Training/practice outputs - Sample aligned document - Familiarity with KMZ, AutoCAD, As-Built, and Red-Line files - Basic working knowledge of QGIS - Understanding of project submission procedures	~56
3. Assigned Tasks & Projects	Apply the acquired skills in actual project sites by preparing, aligning, and submitting required project documentation.	- Alignment of KMZ, AutoCAD, As-Built, and Red-Line documents for assigned sites - Alignment of QGIS documents for applicable sites - Handling project sites with different line quantities - Transfer of aligned files to hard drive	- Training/practice outputs - Sample aligned documents - Familiarity with KMZ, AutoCAD, As-Built, and Red-Line files - Basic working knowledge of QGIS - Understanding of project submission procedures	~184
4. Documentation & Process Improvement	Improve the accuracy, consistency, and completeness of project documentation through systematic review, editing, revision, and quality checking.	- Editing and revision of KMZ, AutoCAD, As-Built, and Red-Line files - Verification of QGIS alignment and project information - Correction of identified discrepancies - Verification of files before final submission	- Quality-checked project files - Corrected alignment discrepancies - Improved accuracy and consistency of project documentation	~36
5. Evaluation & Wrap-up	Evaluate the internship experience, consolidate completed work, and reflect on the technical and professional skills gained.	- Consolidation of completed site documents - Review of technical skills developed - Reflection on challenges and solutions encountered - Preparation of final internship requirements - Final evaluation and feedback from mentor/supervisor	- Final accomplishment report - Consolidated project outputs - Final evaluation - Internship documentation - Summary of skills and learning gained	~8
